AGRICULTURAL RETURNS

OF

GREAT BRITAIN,

WITH

ABSTRACT RETURNS

FOR

The United Kingdom, British Possessions,
and Foreign Countries.

1885.

Presented to both Houses of Parliament by Command of Her Majesty.

LONDON:

PRINTED BY EYRE AND SPOTTISWOODE,

To be purchased, either directly or through any Bookseller, from any of the following Agents, viz.,
Messrs. HANSARD and SON, 13, Great Queen Street, W.C., and 32, Abingdon Street, Westminster ;
Messrs. EYRE and SPOTTISWOODE, East Harding Street, Fleet Street, and
Sale Office, House of Lords ;
Messrs. ADAM and CHARLES BLACK, of Edinburgh ;
Messrs. ALEXANDER THOM and Co., LIMITED, or Messrs. HODGES, FIGGIS and Co., of Dublin.

1885.

[C.—4537.]

SUMMARIZED RESULTS

OF THE

AGRICULTURAL RETURNS.

THE annexed Tables contain the information, usually comprised in the Agricultural Returns of Great Britain, for the year 1885, with Summary Returns for Ireland for the same year. The data for Great Britain have been collected as in preceding years by the officers of the Inland Revenue Department, while the figures for Ireland have been supplied to the Agricultural Department by the Registrar General for Ireland. The particulars for the Isle of Man and the Channel Islands, which are included in the general totals, have been collected by officers under the direction of the respective Governors of those districts. The Returns were directed to be obtained in Great Britain, the Isle of Man, and the Channel Islands, as was the case in the previous year, on the 4th of June, and a summary, subject to corrections in the completed Returns, was published in the London newspapers on the 15th of August; the Returns with the summarized results thereof being now ready as early as it has been hitherto practicable to publish them.

Summary for
the Year
1885.

Summary of
the Returns
published in
August, 1885.

It is proposed to notice, by a comparison of the figures for 1885 with those of preceding years, first the chief points suggested by those relating to Great Britain, to state the causes which have been reported by the Collectors generally to have led to the various changes shown in the Returns, and to allude briefly to those for Ireland.

In Great Britain the number of separate Returns furnished by Occupiers of land and of those obtained by estimates, where Occupiers omitted to make Returns, have been this year 557,293,

Number of Returns received from Occupiers of Land and Owners of Stock in 1885.

and 4,991 from Owners of Live Stock only, thus showing an increase of 878 in the case of Occupiers of Land, and of 56 Owners of Stock. The difference shown is not large, but it is of course no criterion that the holding of land has remained unchanged. The increased number of Occupiers in some Counties is ascribed by the Collectors chiefly to sub-division of land. In other districts, however, the diminution of small holdings by amalgamation or absorption into large holdings is noticed. There are also the instances for which allowance must be made, as heretofore, in respect of the Returns made by Occupiers who have several holdings, either returning the required particulars separately, or on one schedule as may have been convenient to them, every effort being made by the Departments concerned to render the filling up of the schedules as little troublesome as possible to farmers.

It may be convenient to repeat here the explanation that the Returns are ordered to be obtained from all Occupiers of not less than a quarter of an acre of land with the exception of that attached to houses as garden ground.

Acreage of the Land Estimated in 1885.

In respect to the number of Occupiers for whom recourse was had to estimates the Returns so obtained show an increase of 866, the total number being this year 20,493, as compared with 19,627 in 1884. The total acreage of the land in Great Britain estimated by the Officers in default of Returns in 1885 was 1,621,443, compared with 1,483,438 acres in the previous year, an increase of 138,000 acres. Although land which annually becomes the subject of estimate forms but a small per-centage of the total, in the present year it is 5·0 per cent. of the entire cultivated area in Great Britain, so that the general results obtained are hardly in question, yet for the sake of greater accuracy where actual Returns are made, it is important that the obligation to estimate should not increase as it has done this year.

It appears that in Scotland the Collectors are annually compelled to resort to estimates largely in the Counties of Inverness, Ross and Cromarty, and Shetland. The explanation given by the Officers as to the exceptions noticeable in these Counties, however, is that an immense number of the smaller Occupiers among whom land is here distributed speak only Gaelic, and in

parts of them are unacquainted with any other than the local measures in use among them, and that no satisfactory information would be otherwise obtainable. Pains are always taken to verify so far as practicable the estimates made, and in many cases the particulars entered in the Returns are really the results derived from the statements made by Crofters themselves to the Collectors.

In order to meet the desire so strongly urged upon the Department, to procure information in reference to the number and weight of home-bred animals annually slaughtered for consumption, a Special Return has this year been obtained as to the numbers of Cattle, Sheep, and Pigs born between the 4th of June 1884 and the 4th of June 1885; of Cattle, Sheep, and Pigs which died from Disease or Accident; and of Cattle, Sheep, and Pigs which were slaughtered for Meat on Holdings during the period named. The Table No. X. here referred to will be found on pages 76 and 77.

Return as
to Home-bred
Animals
slaughtered
for Consump-
tion.

See Table
No. X.

It is to be regretted that those who have been willing to furnish the desired particulars form so small a proportion of the total number of farmers to whom the Schedules were sent, and who have in other respects completed their Returns. The ratio, as explained in the Note above the Table, is less than two-fifths of the total number, and the results appear therefore to be quite incomplete as data for the object with which the inquiry was undertaken. The Collectors report almost without exception that the request for such information has been universally disliked and often considered inquisitorial, and that it has caused annoyance even among those farmers who have supplied such particulars as they could give. It is added that numbers of them keep no records to enable them to furnish the details required, and that the information where afforded is therefore often not reliable. Moreover, it has unfortunately had the effect of deterring many from forwarding their usual Return. In such cases delay has arisen and the necessity for estimates has been thereby increased, while no sufficient data appear to have been gained in the Special Return compiled from information so inadequate, to compensate for the general manifestation of feeling it occasioned. It is likewise one of those cases in which a Partial Return is misleading for the object in view, and

therefore quite unsatisfactory as a basis for determining general results, as any attempt at estimating, from the peculiar character of the information wanted, would have been merely conjectural and useless.

Total Acreage
of Land under
Cultivation in
Great Britain
in 1885.

The following appear to be the general results of the Returns which have been obtained for Great Britain:—The area reported in 1885 to be under all kinds of Crops, Bare Fallow and Grass, exclusive of Heath and Mountain Land, and of Woods and Plantations, amounts to 32,544,000 acres, as compared with 32,465,000 acres in the previous year, showing an increase of about 79,000 acres. The respective additions in each division are nearly 36,000 acres for England, under 9,000 acres for Wales, and about 34,000 acres for Scotland. Some small portion of the increase is doubtless due to the more accurate Returns made by farmers, but the Reports of the Collectors state that the greater part is caused by the enclosure and reclamation of moor or heath and waste land in different parts of the country.

In several Counties variations occur which are said to be owing to farms that have changed their occupants, when omissions through inadvertence of previous tenants have been discovered. Such omissions occasionally refer to large quantities of land, in spite of the care with which the Rate Books are examined by the Officers each year, as the item *land* is sometimes stated to be only vaguely entered against Occupiers' names without specifying the extent of the Holdings, and the actual measurements of these are frequently only ascertained by Occupiers when estates are sold and the land may be surveyed. Heath or Mountain land has likewise, it is found, been omitted after it has been taken into cultivation by farmers when it should have been included. The local measures of Scotland and Cheshire are still a slight cause of error in one or two counties, but less than formerly.

There are also the usual differences, which do not, however, affect the aggregate cultivated area, accounted for by bordering farms being occasionally included in the Collection of a particular County one year and in that of an adjoining County the next year. An apparent diminution in the East Riding of Yorkshire, amounting altogether to about 16,000 acres, is explained as being due this year to such interchanges with the West Riding.

The Collectors report in several Counties instances of decreases in the extent under cultivation which have taken place owing to land previously agricultural being now appropriated to the construction of Railways, and, in the neighbourhood of towns, to building purposes, Wharfage, Reservoirs for Waterworks, Cemeteries, &c. Land is also mentioned as being here and there out of cultivation.

With regard to the details of particular Crops in Great Britain the most noticeable features as regards Corn Crops, apart from the decrease in the total, seem to be that there is a considerable diminution of the area under Wheat and an increase in that under Barley and Oats. The total quantity of land returned under Wheat in the present year is 2,478,000 acres or 198,000 acres (equal to 7·4 per cent. less) than in 1884, and a decrease of 134,800 acres (or 5·2 per cent.) as compared with 1883, when the breadth was less than had previously been recorded. The diminution of the area under Wheat in 1885 is almost unanimously stated by the Collectors to have been caused by the low prices obtainable for this grain in the autumn and winter of 1884, as the seed time was generally of a highly favourable character in most localities.

Acreege under
Corn Crops in
Great Britain
in 1885.

They observe, likewise, that the tendency among farmers to devote more land year after year to breeding and grazing stock, as offering prospects of better results, has again greatly influenced the more limited acreage of this cereal in all districts where the nature of the soil and climate do not generally promise the probability of large crops, and the Returns in the aggregate confirm the correctness of their statements. In reference to one or two counties, it is added that, were it not for the imperative requirement of straw in which farmers still find an inducement to grow Wheat, its diminution would there have been greater even than it is.

The result, as shown in the falling off just referred to, appears to have been in great measure anticipated, inasmuch as early in the present year the estimates formed by some agricultural authorities predicted that in consequence of the unremunerative prices that had been recently obtainable for Wheat, and in view, moreover, of the very large supplies of foreign Wheat which

Acreage under
Corn Crops in
Great Britain
in 1885.

were known to be available for export to this country, a reduction of more than 10 per cent. in the extent sown with Winter Wheat in England might this year be expected, but that it was possible some of this deficiency might be recovered in the further area to be sown during the spring. So far, therefore, the result is in tolerable agreement with the early published opinions, and it is apparently only the natural outcome of a series of untoward harvests in Europe thus stimulating production all over the world, in combination with abundant crops, and particularly, where this country is concerned, with the more than average yield of the harvest of 1884 in Great Britain, which there now seems every reason to expect will be repeated in the present year.

The diminution shown in the acreage under Wheat this year has been general in its distribution throughout Great Britain. In the county of Lincoln, however, there is an increase of 2,800 acres. In three other counties in England, and the same number in Wales and Scotland respectively, where the usual area under this Crop in these Counties is, however, relatively small, its cultivation has been maintained, but the total increase in them altogether amounts to only 1,300 acres.

In the three divisions of the kingdom the proportionate falling off from the acreage of the preceding year is, for England, 7·2 per cent.; Wales, 4·8 per cent.; and Scotland, 19·7 per cent. The disfavour into which Wheat growing has come with farmers in Great Britain is especially evident in the Agricultural Returns, in which, although the acreage has fluctuated, yet commencing with 1871, its gradual contraction, in alternate years, is very noticeable.

The area under Barley in 1885 was 2,257,000 acres. This is an increase of about 88,000 acres, or 4·1 per cent. as compared with 1884; but it is to be observed that the present year's acreage is 34,000 acres, or 1·5 per cent. less than the acreage of 1883, and there are fewer acres by 165,000 than the average of the previous 10 years.

Oats were sown on 2,940,000 acres, only 25,000 acres, or 0·9 per cent, in excess of 1884. With the exception of the year 1883, however, it is a larger breadth than has been returned

under this crop in any other year since these statistics have been collected. The substitution of Barley, and to a smaller extent of Oats for Wheat, is frequently ascribed to the more remunerative prices obtainable for both these cereals.

Acreage under Corn Crops in Great Britain in 1885.

The acreage under Rye shows an increase compared with 1884 of 3,800 acres, entirely in England. It is an unimportant crop, however, in this country. Beans have decreased by 12,000 acres, while Peas correspond closely with the area so occupied last year. It is to be feared though that, owing to the dry season, the crop will this year have been picked from a smaller acreage.

Altogether the total area under Corn Crops in 1885 is thus brought up to 8,392,000 acres, or 92,700 acres short of that in 1884, a decrease of 1.1 per cent., the average area of the preceding 10 years having been 8,967,000 acres, or 575,000 more.

Total Acreage of the Corn Crops in Great Britain in 1885.

As regards Green Crops in Great Britain in 1885, Potatoes were planted on 548,000 acres, a decrease of 16,000 acres, or 2.9 per cent. as compared with 1884. Some of the reports attribute the lessened area planted to the reasons given for the deficient acreage of Wheat, namely, the unremunerative prices caused by the large crops of last year. The variation, however, is only in ordinary course, as the acreage of 1885 has been but seldom exceeded.

Green Crops in Great Britain in 1885.

Turnips and Swedes have declined; they were this year returned as grown on 2,015,000 against 2,027,000 acres in 1884. Mangold has increased by 27,000 acres, and Vetches, Lucerne, and other Green Crops unenumerated have increased by 35,000 acres. The total area of Green Crops thus amounts to 3,521,000 acres, an increase of nearly 34,000 over the figures of the preceding year.

Total Acreage under Green Crops in Great Britain in 1885.

The extended acreage of Sugar Beet mentioned in last year's Report as having been returned in Suffolk, does not appear to have been continued. Those who are interested in the subject of Sugar Beet will find in Table XVII., the latest available information relating to its production in Foreign Countries. It appears that the average yield per acre of all Countries for the years embraced in the Table is rather over 217 cwts. The rate of produce of sugar per cwt. of Beet Root used being for Austro-

Hungary and Germany—the only countries for which this information is available—taken together, about 10½ lbs., while the total quantity of sugar produced per acre averages nearly a ton.

The average value of sugar produced from an acre of Beet (at Import Value, in 1884, viz., 14s. 2d. per cwt.) appears to be about 14l. sterling.

Of the minor Crops, Flax was grown on 2,400 acres, a slight increase over 1884.

Acreage of
Hops in 1885.

See Table
No. VIII.

Hops, notwithstanding the largely increased imports of 1884, as compared with those of the previous year, were planted on 71,000 acres, an increase of 2,000 acres or 3·0 per cent. over 1884, and within 500 acres of the area so occupied in 1878, when the largest acreage was returned. Table No. VIII. shows in detail the counties and certain districts in which Hops are grown.

Bare Fallow
Land in
Great Britain
in 1885.

Bare Fallow in Great Britain has further decreased in a much greater measure this year than has been usual. The diminution is from 749,000 to 560,000 acres, a smaller area than in any year since 1875, when there were only 558,000 acres in Fallow. The decrease is chiefly in England and Wales, and is said by the Collecting Officers to be owing to the more favourable seed time, the fine dry seasons in Autumn and Spring having at length enabled farmers to clean their land and bring it under the cultivation of Seeds and Grasses, or under pasture for Stock purposes. In many localities the disposition among farmers thus to utilise all their available land is evident, as there is not a single County in England where diminution of the extent under Fallow has not occurred.

Acreage under
Rotation
Grasses in
Great Britain
in 1885.

Acreage under
Permanent
Pasture in
Great Britain
in 1885.

Clover and Rotation Grasses show a very considerable increase in Great Britain, their extent being 4,654,000 acres, or 272,000 acres more than in 1884. This extension, accompanied as it is this year by a much smaller relative increase than is usual of 51,000 acres in Permanent Pasture, appears to give significance to the statements in the reports of many of the officers that some confusion of mind has been occasioned by the sub-headings re-introduced into the Schedules this year for the purpose of distinguishing the acreage of Clover as well as of Permanent Grass, separately intended for Hay, from that to be used as green

See Table
No. VI.

fodder, with the view of ascertaining the estimated yield per acre of Hay produced. These sub-headings showing the distinction here referred to were formerly given up, for the sake of simplification, owing to representations that were made that they caused additional trouble to farmers, but they were again rendered necessary when the estimated yield per acre of these Crops in Hay was required. The particular classification to be made by occupiers generally in the Schedules in distinguishing between land that is ultimately to be broken up and Permanent Grass has always been more or less a difficulty, especially as to land under Rotation Grasses for three or more years, and has often been the cause of inaccuracies which have only been discovered in succeeding years.

Acreage under
Permanent
Pasture in
Great Britain
in 1885.

On the other hand there are some few counties in which allusion is made to the circumstance that the more precise sub-division adopted in the Schedules this year may have led to greater accuracy in the information, and that part of the variation shown is, in such cases, only apparent. Upon the whole it is considered that there may be some exaggeration in the quantities, more or less, under the respective heads of Clover and Permanent Pasture, though it may be remarked that there are but very few Counties in England and Wales where large relative additions to the former have not been made. As to the main fact of an important increase, taken together about 323,000 acres, in the extent of land covered by both Clover and Grass, there can, however, be no question that the Returns properly represent the condition of Agriculture in respect of the acreage so occupied in the present year.

Much of the deficiency in the Wheat acreage of this year, compared with 1884, has doubtless been thus appropriated, while the large quantity of land previously under Fallow has also greatly contributed towards the aggregate shown, probably with a view to the land being eventually laid down in grass.

Most of the reports of the Officers agree in the information they furnish as to the continually increasing tendency among Agriculturists towards making provision for greater numbers of Cattle and Sheep by laying down land in both Clover and Grass, and that the former appears to be much more in favour in many districts. The conversion of arable land to these purposes, instead

Acreage under
Permanent
Pasture in
Great Britain
in 1885

of to Corn Crops, is still in the same direction as the general course of changes which have occurred in so marked a degree in recent years, and there can hardly be more conclusive evidence of this fact than the augmentation shown this year under these heads when taken together in the Returns.

The adoption of the system of Ensilage may perhaps have been influential in determining the change, as the valuable properties attributed to Clover and Grasses for this purpose are alluded to by some of the Collectors.

As already mentioned Permanent Pasture in Great Britain appears to have increased by only 51,000 acres over 1884, a smaller addition than has been returned in any year since 1870. The total extent is now shown to be 15,342,000 acres. Part of the addition is attributed as in preceding years to the enclosure of waste land before referred to, but chiefly to the causes mentioned in regard to the increase in Live Stock. It is to the circumstance of the large increase shown in Clover, &c., whereas the addition to Permanent Pasture is so much less than we have of late years been accustomed to see, that the contraction in the rate of normal increase of the latter has raised a doubt as to whether a portion of the acreage really belonging to the latter classification has not this year been erroneously entered by occupiers under the first named title, with the result of apparently augmenting the aggregate Clover area, and making the addition to Permanent Grass smaller than we now annually look for. The change is the more striking inasmuch as the local Collecting Officers seldom refer to any large quantities of pasture as having this year been broken up in order to lay the land down in Clover, Sainfoin, or Rotation Grasses. On the other hand there are occasionally statements to the effect that, owing to the late dry Spring, much Clover land in some districts remained unbroken up this year, in view of possible scarcity, later, in the growth of Sheep-keep. The respective figures are being carefully inquired into, and meanwhile they remain subject to correction.

Passing from the comparison of the results of the present year in Great Britain, as compared with 1884, in regard to Permanent Pasture, to those presented in the rate at which it has progressed in England, in which division of Great Britain the major portion of the augmentation under the latter head has occurred, a

reference to the acreage added to the total cultivated area, and to the increased quantity of land placed under Permanent Pasture since 1880, shows that while the total extent of land under cultivation in England has been enlarged by 284,040 acres, or in the proportion of 1·15 per cent., the addition to Permanent Pasture, notwithstanding the smaller addition of the present year, has been no fewer than 767,950 acres, or 6·70 per cent. in the five years. The rate at which this progression has taken place has varied from 1·69 per cent. in 1881 to 0·26 per cent. in 1885, the average rate of the previous four years ending 1884 having been 1·56 per cent.

Acreage under Permanent Pasture in Great Britain in 1885.

The area of land appearing under Arable in Great Britain in 1885, in consequence of the addition to the Clover area, is this year, more by nearly 27,000 acres, about 17,202,000 acres being returned against 17,175,000 in 1884. The relative proportions of the whole quantity of land cultivated in Great Britain are now:—47·1 per cent. under Permanent Pasture, 14·3 per cent. under Clover and Rotation Grasses, 25·8 per cent. under Corn Crops, and 10·9 per cent. under Green Crops.

There is a further increase this year of 2,800 acres in the area of Orchards in Great Britain, it being now 197,539 acres. Many of the Collectors refer to new plantations of fruit trees, of all descriptions, in consequence of the continually growing demand for fruit in the large towns. Part of the addition is, however, owing to ground so occupied having been previously returned as under grass only, without including it, as it should have been, under Orchards also. It appears that Rate Books, if consulted, do not always show the acreage of Orchards, except where they are separately assessed, so that omissions under this head are not easily discovered. Market Gardens have, likewise, extended, more land being annually appropriated to their produce for the growth of strawberries and bush fruits as well as with the object of increasing the supply of fresh vegetables.

Land used for Orchards, Market Gardens, &c. in 1885.

See Table No. VII.

The acreage under Market Gardens is, this year, 59,473 acres, as compared with 52,975 acres in 1884.

For land used by nurserymen for the growth of trees, shrubs, &c., the Returns for 1885 show practically the same acreage as last year.

Land under
Woods and
Plantations.
See Table
No. VII.

The extent occupied by Woods and Plantations will be found in the Table relating to Orchards, &c. As mentioned in former Reports it does not vary greatly from year to year. Annual Returns are not, therefore, obtained for it, and the acreage, as ascertained in 1881, is again inserted for Great Britain in 1885.

Number of
Live Stock in
Great Britain
in 1885.

Turning now to the various kinds of Live Stock in Great Britain, it is satisfactory to find that there is a noteworthy increase in Cattle. Sheep and Lambs show a proportionately smaller addition, but in Pigs there is a considerable decrease. There is also a further decline of 14,000 in Agricultural Horses, accounted for in the same manner as was the reduction in the numbers of this class in 1884 compared with the previous year, namely, the diminished need of them owing to the smaller quantity of land under Corn Crops and the more general use of steam applied to agricultural cultivation, enabling farmers thus to economise labour. The deficiency is, however, not made up, as was then the case, by the increase in Unbroken Horses and Mares, returned as kept solely for breeding, which have only increased by about 9,000. The imports of Foreign Horses in 1884 increased in number over those of 1883, and so far in the present year this position has been proportionately maintained, while the exports have declined. There is, however, a great difference between the value per head of Horses imported and those exported, the former averaging in 1884 17*s.* 2*d.*, while those last mentioned averaged 5*8l.* 7*s.* 1*d.* each.

As regards Horned Cattle, the numbers exhibit an important increase in each of the several classes, the total number being now 6,597,964, or 328,823 (equal to 5·2 per cent.) more than in 1884, and 635,185 (or 10·7 per cent.) more than in 1883, the figures of the present year being the largest yet recorded for Cattle in these Returns. Cows and Heifers in milk or in Calf have increased in Great Britain by 139,334 or 5·8 per cent. Other Cattle of two years of age and above number 1,465,505 or 5·7 per cent. more, and Young Cattle have increased by 110,317 or 4·4 per cent.

The increase in Milking Cows appears, from the reports, to be due to more general recognition of the value of Dairy Farming, that it is, at any rate, a fairly profitable branch of Agriculture, especially where the proximity of large centres of population or of railways provide available markets for the disposal of the produce. The larger number of Young Cattle would appear to have

followed in usual course that of the class just noticed, while the addition to Two-year old Cattle at the period of the annual census is ascribed by the officers to the continued preference for rearing and feeding Live Stock instead of corn growing, and there is occasional mention confirming it, in respect to England, that farms lately in the hands of owners have been again re-let and stocked. In many counties, however, the low prices lately obtainable have, it appears, induced farmers who have sufficient capital to hold over large numbers in the hope of improved market value, and this is said to have materially increased the numbers in such localities.

Number of
Live Stock in
Great Britain
in 1885.

Sheep and Lambs taken together show this year an increase of 466,000 over the numbers in 1884, distributed in an addition to Sheep of one year and above of 152,700 and of 313,500 to Sheep under one year, the total number being now 26,534,000.

In reference to the relatively small increase in Sheep shown in the Returns for Great Britain, not quite 1 per cent., it may be remarked that Sheep in Scotland have suffered a decline of 29,000 as compared with last year, while the increase in the number of Lambs is only about 3,000, and in many of the Eastern Counties of England, notably those of Lincoln, Norfolk, and the East Riding of Yorkshire, the diminution in Sheep has been proportionately as great. The Collectors mention the scarcity of keep in the early part of the year, compelling farmers to dispose of their Sheep, as one of the main causes which have contributed to it, but that agricultural depression and the low prices obtainable have also been in some localities important factors in the result. Following closely upon the large increase of last year a similar increase could hardly have been expected.

The Lambing season is stated to have been generally favourable, and it seems that this has in a few districts prevented the appearance of a still larger number in the Returns, for, Lambs being ready earlier for market, farmers were induced to realise their value. There are counties where severe losses have been sustained owing to wet and cold weather in the spring, in hilly districts and in Scotland, where large numbers died from exposure and insufficient food. In the county of Inverness no less than 15,000 Sheep and Lambs were disposed of in a few localities

Number of
Live Stock in
Great Britain
in 1885.

where land has been converted to purposes other than to Agriculture. Fluke or Liver Rot is also referred to as being partly a reason of decrease in this county.

There is a further decline of 181,000 or 7 per cent. in the number of Pigs in Great Britain, the total being now 2,403,000. The prevalence of Swine-fever in a great many counties is stated to have caused serious loss, and to have thus been the chief source of the decrease, but the Collectors cite also the competition of foreign Bacon and Pork as contributing to it, notwithstanding the cheapness of pig food. Although the quantities of this description of Meat imported in 1884 were less than those in 1883, it appears that in the first eight months of the present year the total importation of Bacon, Hams, and Pork from all countries has amounted to 3,068,792 cwts., which is in excess of the imports of the same period in 1884 by 522,441 cwts.

Number of
Poultry in
Great Britain
in 1885.

The number of Poultry in Great Britain as returned in 1885, exclusive of those kept in towns or by cottagers with less than a quarter of an acre of land, is 15,963,000 as compared with 16,061,000 in 1884, a decrease of 98,000 on the total of the several kinds of Poultry included in the Returns. It was pointed out in last year's Report that the number of Poultry in Ireland exceeded that in England, and as the numbers in Ireland have since increased by over a million the contrast then alluded to is still more remarkable.

It appears probable, however, that in Great Britain the figures do not in some counties, even approximately, represent the actual number kept, as the Officers direct attention to the untrustworthy character of many of the Returns in this respect. It is mentioned that farmers are very unwilling to give these details when asked to do so, and will not take any pains to insert them correctly in the Schedules.

These Returns as to Poultry may, however, improve when it is found that no injury is sustained by those who give fairly accurate information. In comparing the numbers returned in England and Ireland respectively, it should be remembered that the Irish Returns embrace Poultry kept by Occupiers of all Holdings, whereas those obtained for Great Britain include only such as are furnished by Occupiers of a quarter of an acre of ground or more.

The increase in the Imports of Poultry and Eggs in the last few years, as shown by the values in Table XXX. (Group 2) appended to this Report, show that there is scope for effort in this minor branch of Agriculture.

In the Returns of the Crops and Live Stock in Ireland the following changes are to be noticed. Instead of an increase there is a decrease in the cultivated area. The diminution extends to Corn Crops, Green Crops, and Permanent Pasture, while Flax and Rotation Grasses each show a relatively large increase. As regards Corn Crops, Wheat was sown in 70,800 acres, a slight increase over the breadth of last year, when 69,000 acres were under this Crop. Barley is likewise greater by 12,000 acres, but there is a decline in Oats of 19,000 acres, as they covered only 1,328,000 acres compared with 1,347,000 in the preceding year, making altogether with the minor Corn Crops a total area of 1,594,000 against 1,599,000 in 1884.

Ireland.

Total Acreage of Land under Cultivation in Ireland in 1885.

Among Green Crops the Potato acreage is practically unchanged, 797,000 acres having been so planted. Turnips were less, however, by 7,000 acres, occupying 297,000 acres against 304,000 in 1884. Mangold, Cabbage, Kohl-Rabi, and Rape, together with Vetches and other Green Crops, except Carrots, slightly increased, the total amounting to 1,218,800 acres compared with 1,221,400 acres in the previous year, and leaving a net decrease of 2,600 acres under these Crops.

A noticeable feature is the increase in Flax which was grown on 108,000 acres, or 19,000 acres over the acreage of the previous year. The land returned under Bare Fallow was less by nearly 4,500 acres.

Clover, Sainfoin, and Rotation Grasses, show a further increase of 70,000 acres. On the other hand there is a decrease in Permanent Pasture of 100,000 acres, the area of the latter being now 10,246,000 acres as against 10,346,000 in 1884.

It will thus be seen that the extended acreage under Clover and Rotation Grasses with the increase in Flax do not counter-balance the decrease in the Corn and Green Crops together with the large reduction apparent in the area under Permanent Grass, so that the Cultivated Area in Ireland shows the diminution in

Ireland.

the past year of 23,800 acres. The area being now 15,219,000 acres compared with 15,242,800 in the preceding year.

Number of
Live Stock
in Ireland
in 1885.

As regards Live Stock in Ireland, Horses have increased from 480,846 in 1884 to 491,147 in 1885. The several descriptions of Cattle are also greater in number.

Milking Cows and Heifers show an increase of 61,026 or 4·5 per cent. over 1884. Other Cattle two years old and above are more by 27,582 or nearly 3 per cent., and Young Cattle have advanced from 1,834,906 to 1,862,782 or 1·5 per cent., making the total number of Cattle 4,228,751 or 2·8 per cent. more than last year.

Sheep and Lambs have both increased. The numbers are together 3,477,840 or 234,268 over 1884, the number of Sheep being now 2,138,298, and of Lambs 1,339,542.

Pigs on the other hand are fewer by 2·8 per cent., as there are this year only 1,269,122 against 1,306,195 in 1884, a decrease of 37,073.

The number of Poultry has increased from 12,746,000 in 1884 to 13,849,000 in 1885.

United
Kingdom.

Comparisons
for the Years
1884 and 1885.

Taking the figures for the whole of the United Kingdom, including the Isle of Man and the Channel Islands, it will be observed that there is an increase over the Returns of last year of 54,000 acres as regards the total cultivated area. Corn Crops have a less acreage while Green Crops have a larger one. There is an important extension in Rotation Grasses due to large additions in each Division of the United Kingdom, but Permanent Pasture, for the first time since 1870, has diminished in area by about 51,000 acres owing to the decreased acreage under this head returned for Ireland.

Cattle and Sheep have again increased considerably in number, but in Pigs there is a further decline both in Great Britain and Ireland.

Comparisons
for the Years
1884 and 1885.

The following Table shows a comparison of the figures for the United Kingdom, including the Isle of Man and the Channel Islands, between the years 1884 and 1885 :

ACREAGE.	1885.	1884.	1885 compared with 1884.

Comparisons
for the Years
1884 and 1885.

The usual Table prepared for this Report showing the relative course of Agriculture in the counties of England, arranged in two divisions of chiefly Grazing and chiefly Corn-growing counties, has next to be noticed.

Relative
course of
Agriculture
in Grazing and
Corn Counties
in England
in 1885.

The Grazing or Western Division, it may be explained, includes 21 counties:—Chester, Cornwall, Cumberland, Derby, Devon, Dorset, Durham, Gloucester, Hereford, Lancaster, Leicestershire, Monmouth, Northumberland, Salop, Somerset, Stafford, Westmorland, Wilts, Worcester, York (North Riding), and York (West Riding).

The Corn or Eastern Division includes 21 counties:—Bedford, Berks, Bucks, Cambridge, Essex, Hants, Hertford, Huntingdon, Kent, Lincoln, Middlesex, Norfolk, Northampton, Nottingham, Oxford, Rutland, Suffolk, Surrey, Sussex, Warwick and York (East Riding).

Although the number of the Counties is the same in each of these groups the total Acreage is larger in the Grazing than in the Corn Division, in the ratio of 53 to 46 per cent. of the total Acreage under Crops and Grass in England,

ACREAGE under CROPS, and NUMBER of LIVE STOCK, in GRAZING COUNTIES and in CORN COUNTIES of ENGLAND, and PER-CENTAGES of the TOTALS for ENGLAND, in GRAZING and CORN COUNTIES respectively, in the year 1885.

Fowls - - - - -	5,259,503	55·0	4,296,550	45·0

A comparison of some of the results in the Table for 1885 with those published in 1883 and 1884 shows a few slight variations which it may be desirable to notice. Thus in the acreage under Corn Crops the per-centage proportion of the total for England in the Grazing Counties is now 37·2 against 37·5 last year and 37·7 in 1883, Wheat being now 33·5 in those Counties compared with 33·6 in 1884 and 33·9 in 1883. Potatoes have further increased in the Corn Counties where the proportionate per-centage is this year 43·8 against 43·3 in 1884 and 42·2 in 1883. There are also differences in certain other Green Crops, but the total acreage under these Crops and Rotation Grasses has nearly the same distribution as last year. The per-centage of Cabbage, Kohl-Rabi, and Rape has increased in the Corn Counties from 60·6 in 1884 to 61·7 in the present year, and Vetches, Lucerne, &c., have here likewise advanced, the per-centage being 72·3 against 70·6 in 1884.

Proportionate
Per-centages
of Acreage
under Crops
and of Number
of Live
Stock in Graz-
ing and Corn
Counties in
England
in 1885.

In Bare Fallow the proportion in the Corn Counties has again increased, the per-centage in these Counties being 62·6 as against 61·4 in 1884.

The increase in Flax is in the Grazing Counties, the relative per-centages being 56·8 as compared with 43·1 in the previous year.

In Clover and Grasses under Rotation respectively reserved for Hay and not for Hay, as well as those of Permanent Pasture similarly classified, in each of these Divisions, the proportionate acreage and percentages have been re-introduced with the view of comparing the changes in distribution which may occur in subsequent years.

As regards Live Stock, in Cattle there is but little difference, the distribution being nearly the same as last year. The number of Sheep, however, in the Grazing Counties is this year 53·3 of the total, and 46·7 in the Corn Counties, the per-centages in 1884 having been 52·7 and 47·3. Of Pigs the decrease is most marked in the Corn Counties, the proportionate number in this Division being now 50·7 of the total against 52·1 in 1884.

Permanent Pasture—						
For Hay - -	2,194,877	16·4	1,285,745	11·1	3,480,622	14·0
Not for Hay - -	5,892,902	44·2	2,856,291	24·8	8,749,193	35·2
TOTAL - - - -	13,338,867	100·0	11,541,440	100·0	24,880,307	100·0

Again, in reference to the principal characteristics of the cultivation of the two Divisions, as shown in the above Table, it appears that in the Corn Counties 35·7 per cent. of the cultivated acreage in that Division is this year appropriated to Corn Crops and 35·9 to Permanent Pastures, while in the Grazing Counties the acreage under Corn Crops is only 18·3 of the cultivated area of the Division, the acreage of Permanent Pasture amounting to 60·6 per cent. of that area.

Comparison between Stock and Acreage under Cultivation in Great Britain in 1885.

See Table No. III.

Comparing Live Stock with acreage in the three Divisions of Great Britain, there were in proportion to every thousand acres of land returned as under Crops and Grass in 1885 in England of Cattle 189, against 179 in 1884, and of Sheep 676, against 661 in the previous year. In Wales the proportionate Numbers were of Cattle 252, against 242, and of Sheep 982 in 1885 as compared with 946 in 1884, while in Scotland there were 243 head of Cattle in 1885 against 236 in 1884, and of Sheep 1,436 in 1885 against 1,451 last year.

With a view to increase the usefulness of these Returns the Comparative Tables in continuation of Parliamentary Returns that have been prepared from time to time in consequence of special demands which have arisen, have again been included among them together with the additions made last year. These are now supplemented by others embracing and expanding the information formerly given in the Tables, besides giving other particulars which can hardly fail to be of interest on points in which agriculturists are concerned. The imports of animals, of quantities of Meat of all kinds, and the various countries whence the supplies are derived, the respective values per head of animals imported, the prices of certain agricultural produce, and other particulars are herein shown.

Imports of Meat and other Produce. See Tables Nos. XXX. to XXXV.

In a few cases the Tables have been re-arranged, and summaries inserted for the purpose of giving the general results more clearly, and at the same time of rendering the information as complete as has been practicable.

The interest taken at present in the subject of Silos and Ensilage has induced the Department to obtain further information in regard to them, and a Table relating to the number of Silos constructed in Great Britain for the Ensilage of Fodder as returned to June, 1885, containing similar information to that of last year, and arranged for comparison with the results then shown, has been included and will be found at pages 74 and 75, showing the counties in which the Silos are situate. It appears that the number has greatly increased, there being now 1,183 in Great Britain as compared with 610 in 1884, while their total capacity has increased by 1,451,362 cubic feet, and others are said to be in course of construction.

Silos and Ensilage. See Table No. IX.

Moreover, in accordance with the proposal adverted to in last year's Report, Forms were issued by the Department to all persons who had been ascertained to possess Silos in various districts in Great Britain, for the purpose of affording, in replies to a schedule of questions, framed upon the experience already gained in regard to this subject, information that should be of value to those

Silos and
Ensilage.

interested in it. To the questions put by the Agricultural Department a large number of replies were received, and, as it was considered that some of these would have influence with agriculturists who have themselves already made experiments in this direction, as well as with those who are contemplating the construction of new Silos, the permission to allow the publication of their names with the statements furnished, was obtained from the majority of those who contributed them. These will be ready about the same time as the present Agricultural Returns, but as they were rather too voluminous in character to be conveniently included among them they will be published as a separate Parliamentary Paper.

Insects injurious to
Crops in Great
Britain.

A Series of Reports on Insects injurious to Hop Plants, Corn Crops, and Fruit Crops in Great Britain are also in the course of preparation for the Agricultural Department by Mr. Charles Whitehead, F.L.S., F.G.S., who voluntarily undertook this work in consequence of a question put by Mr. Rankin to the Chancellor of the Duchy of Lancaster in the House of Commons in the month of May last. No. 1 of the Series—Insects injurious to Hop Plants—has been already issued in the form of a Parliamentary Paper [C.—4534.], and the Reports relating to Insects injurious to Corn Crops and Fruit Crops will, it is hoped, be ready shortly. These will be followed by a Report upon Insects injurious to Root Crops, which is promised early in the ensuing year.

Returns for
British Possessions and
Foreign
Countries.

Tables relating to the Crops and Live Stock in British Possessions and in Foreign Countries are again inserted and contain, through the courtesy of the Officers of the Board of Trade who have supplied it, the latest official information in each case available. The most recent Returns which have been received, showing the extent of the Agricultural resources of the various British Possessions in which Agricultural Statistics are published, are given on pages 156 to 172.

In respect to our possessions in India, a memorandum on the Indian Wheat Crop of the Season 1884-85, issued by the Revenue and Agricultural Department of India, has been received, stating that the area under Wheat and the outturn during the year 1884-85 could be estimated with some approach to accuracy in the provinces of the Punjab, the North-Western Provinces and Oudh, the Central Provinces, Bombay and the Berars, which taken together comprise in ordinary years nearly three-quarters of the total area of wheat cultivation in India. For the remaining one-fourth, which is contained in Bengal and in the Native States of the Rajputana and Central India Agencies, Mysore, Kashmir, and Baroda, the figures are less trustworthy, owing to the absence of any organised agency for testing area or outturn.

The normal area under wheat during the last few years in India is believed, according to the latest estimates, to be about 26,000,000 acres, of which the average outturn is estimated roughly at 7,135,000 tons or 33,296,666 quarters of 480 lbs.

The whole area cultivated in the year under review, which was exceptionally favourable for Wheat, is estimated to have been approximately 27,620,223 acres, with a yield of about 7,713,096 tons or 35,994,448 quarters. The following figures show the respective actual area and outturn of the Provinces above-mentioned in 1884-85 and the area of average years.

In the Punjab, the area sown was 7,381,400 acres, the estimated normal area under Wheat being 7,000,000 acres. The yield of 1885 is put at 2,857,099 tons or 13,333,000 quarters, this estimated outturn being calculated from that of the average of the North-Western Provinces and Oudh. In the last-named Provinces the area for the present year was ascertained to be 5,298,026 acres, and the outturn is estimated at 2,100,000 tons or 9,800,000 quarters. The average area so occupied appears to be 5,600,000 acres.

In the Central Provinces there were in 1885, 3,700,000 acres under Wheat or 300,000 acres less than the normal area. The produce of the present year's acreage is estimated at 817,857

British India. tons or 3,816,000 quarters. In Bombay the area is 2,670,000 acres, or 1,070,000 acres in excess of the average area grown. The estimated yield, calculated upon that of the average of the Central Provinces, is given as 590,183 tons or 2,754,000 quarters.

The Berars have an area of 819,057 acres with an estimated outturn for this year of 135,770 tons or 633,000 quarters. The normal area occupied by Wheat is estimated at 700,000 acres.

The latest estimates as to the area and outturn for Bengal and the Native States show that the aggregate estimated area under Wheat in 1885 was 7,751,740 acres, and that the estimated yield amounts to 1,212,187 tons or 5,656,000 quarters. The average total area on which this crop is sown being 7,208,000 acres.

With regard to the prospects of the several provinces, the reports in April added little to the information given in the previous months, from which the conclusion may be drawn that the Wheat harvest has on the whole yielded a fair average outturn. There was however reason to fear that injury had recently been caused to the Wheat on the threshing floors of the Punjab, where the Wheat harvest is later than elsewhere, by the abnormal rain which had fallen in May.

It is added that the Statistics before the Government of India tend to prove that the agricultural population so far from having, as is sometimes asserted, suffered from any diminution caused in the food-supply by the export of Wheat, have, on the contrary, derived considerable benefit in the higher price which they have received for Wheat, in the place of which they would to some extent have had to grow cheaper grains or non-edible crops. It has been proved in Oudh, for instance, that the ordinary amount of cheaper grains required by the people has still been kept in the Province, but that the value of the grain exports has been nearly doubled by the development of the Wheat trade. In the North-western Provinces it is reported that nearly a million acres have been brought under cultivation within the last five years, but that the area under other food-crops has not only not diminished but has actually increased. The reports from the Central Provinces show a similar state of things. The Punjab,

in which Province alone Wheat is the staple food of the Agricultural population, may also be said to owe its chief prosperity to the export of its surplus Wheat.

British India.

For the Dominion of Canada, Returns have this year been furnished, through the Board of Trade, relating to the Provinces both of Ontario and Manitoba. In the case of the former the Returns extend back to 1882, and supply the omission, as to the particulars now given in regard to this Province, in the Tables compiled last year. From these statistics it would appear that in 1884 the area sown with Wheat was 1,586,000 acres as compared with 1,683,000 in 1883, the estimated quantities produced being 34,327,000 bushels in 1884 against 21,383,000 bushels in the previous year, the estimated average yield per acre having thus been 21.6 bushels in 1884, whereas in 1883 it was only 12.7 bushels. Barley occupied 700,400 acres in 1884 with an estimated crop of 19,119,000 bushels, and 757,000 acres in 1883, the produce being 18,414,000 bushels.

Dominion of Canada.

Oats covered 1,481,000 acres in 1884 and 1,418,000 acres in 1883, with an estimated yield of 57,696,000 bushels and 54,573,000 bushels respectively.

As regards Live Stock, the total number of Horses in 1884 is given as 535,000, of Horned Cattle 1,925,000, of Sheep 1,890,000, and of Pigs 916,000.

The Crop Bulletins received by the Agricultural Department from Manitoba for the months of June and July state, in reference to the product of the Wheat Crop in that Province in the present year, that it was in a flourishing condition, and that the average yield would be quite equal to that of 1884, "which was 20.11 bushels per acre; this would give a total produce for Manitoba this season of 7,179,500 bushels or about 5,675,000 bushels for export."

The area shown to be under Oats in this Province was about 18,000 acres in excess of that area so covered in 1884, with an estimated average yield per acre of 30.55 bushels, giving an increase of half a million bushels over last year.

With respect to the Australasian Colonies, information, in regard to the crops in 1884, has been received from each of them. In four out of the seven the area under Wheat at last harvest shows a decrease, but in South Australia, Western Australia, and Queensland, there is an increase.

In New South Wales the acreage under this crop was 275,200 acres; in Victoria, 1,096,300 acres; in Tasmania, 34,000 acres; in New Zealand, 270,000 acres; the total decrease in these being 127,400 acres, while in the other three Colonies, namely:—South Australia, Western Australia, and Queensland, the acreage was respectively 1,942,400 acres, 29,400 acres, and 11,300 acres, the increased acreage amounting in these last-mentioned Colonies altogether to 104,100 acres.

The total area under Barley in the whole of these Colonies was 136,600 acres against 107,200 in the preceding year.

Oats covered nearly 600,000 acres, as compared with a total of 499,100 acres in the previous season; the major portion of the acreage so occupied being in Victoria and New Zealand, the yield in 1884-5 for these two Colonies being respectively 4,392,600 bushels and 12,360,400 bushels, at the rate of 23·4 bushels and 34·8 bushels per acre.

The Returns of Maize for the same year in New South Wales and Queensland, where this cereal is chiefly grown, show an acreage of 115,600 acres for the former and 61,000 acres for the latter Colony, with a total produce taken together of 4,302,500 bushels.

The produce of the Wheat Crop in the seven Colonies amounted altogether to 37,357,800 bushels, or an average of about 10·2 bushels to the acre. Of this quantity New South Wales produced 4,203,300 bushels or 15·3 bushels per acre, Victoria 10,433,100 bushels or 9·5 bushels per acre, South Australia 14,621,700 bushels or 7·5 bushels per acre, Western Australia 382,400 bushels or 13·0 bushels per acre, Tasmania 654,600 bushels or 19·3 bushels per acre, New Zealand 6,866,700 bushels or 25·4 bushels per acre, and Queensland 195,700 bushels or 17·2 bushels per acre.

Potatoes were planted on 93,100 acres in the seven Colonies, Australasia. producing 396,000 tons, or 4.3 tons to the acre, the highest average yield, that of New Zealand, being 5.7 tons.

The Returns received show that the total acreage of the Vineyards in Australasia increased by about 2,200 acres as compared with 1883. In respect to the quantity of wine produced in 1884, however, as compared with the previous year, a decrease is shown in the Colonies of New South Wales and Queensland amounting together to 171,900 gallons, while in Victoria and South Australia the total quantity increased by 155,200 gallons.

As regards Live Stock in Australasia, on comparing the numbers of 1884 with those of the preceding year it appears that, in the seven Colonies there were altogether 1,269,100 Horses in 1884, against 1,235,700 in 1883. Horned Cattle had decreased from 8,403,700 in 1883 to 8,153,300 in 1884, while the number of Sheep had also declined, the aggregate being 74,328,700 against 79,872,300 in 1883. Pigs on the other hand had increased by 79,500.

The supplies of fresh Mutton from Australia and New Zealand increased from 103,689 cwts. in 1883 to 304,124 cwts. in 1884. In the first eight months of the present year they have reached 241,835 cwts., an increase of 51,000 cwts. over those imported during the same period last year.

The Imports of Wool from Australia were larger than in 1883 by 29,718,063 lbs., the total weight having been 381,403,669 lbs. in 1884.

Following the Tables relating to the several British Colonies are the Returns containing the latest Statistics available for various Foreign Countries, as to the acreage of Crops and their estimated production, with the number of Live Stock of each kind. A comparative Table has also this year been inserted at pages 90 and 91, showing the results of Wheat Culture in various parts of the world. The details confirm the conclusions generally arrived at previously respecting the relative produce of Great Britain and other Countries, namely, that the estimated average yield per acre of this Crop in Great Britain is much above that of its average yield elsewhere.

Tables relating to Foreign Countries. See Nos. LV. to LXX.

96
 Russia.

For Russia Returns have been obtained relating to Corn and other Crops for the year 1884, with corrected figures for 1883, the latest respecting Live Stock being, however, those for 1882, while the acreage is not given for any year subsequent to 1881. Taking the principal Crops it would appear that the production of Wheat in 1884, exceeded that of the previous year by 46,432,000 bushels, the total having reached 258,562,000 bushels.

Barley and Rye had each increased, producing 128,948,000 bushels, and 664,958,000 bushels respectively, while the yield of Oats is put at 485,353,000 bushels.

According to the Return of Live Stock in 1882, Horses were the only description of Stock which had increased as compared with the numbers given for the year 1877, the latest previously available. In the former year there were 20,015,659 Horses; 23,845,104 Cattle, 47,508,966 Sheep and Lambs, and 9,207,666 Pigs.

United States
 of America.

With respect to the United States, Reports prepared by the Department of Agriculture at Washington stated that the Winter Wheat region, which does not include the Territories, promised a production of about 215,000,000 bushels. This is a reduction of nearly 40 per cent. from the Winter Wheat record of last year, a decline which appears to be quite unprecedented, in view of the fact that the area covered extends from Connecticut to Texas and includes the Pacific Coast. The disposition last Autumn to reduce its breadth, on account of the low price, was checked, by the loss sustained on the Winter Wheat area from freezing, and later by British-Russian war rumours. Spring Wheat, however, continued to promise, in the absence of blight or storms, a large crop, and the indications, considering condition, and area which might exceed 11,000,000 acres by 100,000 or more, favoured the probability of a yield of about 148,000,000 bushels. This makes an aggregate of 363,000,000 bushels or less by 149,763,000 bushels than the yield of 1884, and the smallest crop returned since 1876. It was added that the year's surplus for exportation will probably not exceed 30,000,000 to 40,000,000 bushels.

The September Report, however, states that owing to injury of the grain from heavy rains and wind storms over large areas in the North-West, the condition of Spring Wheat has been impaired

since the first of August, and that the aggregate production may now be placed at 351,000,000 bushels, namely:—217,000,000 bushels for the winter-wheat area, and 134,000,000 bushels for the remaining area, unless the result of thrashing changes present expectations.

For Barley the Returns indicate a breadth sown very little, if any, less than that of 1884, but its condition was not up to an average, although it may yet be a good Crop.

The area in Oats appears to have increased by 4 per cent. over that of last year. It was then 21,300,000 acres, having exceeded that of 1883 by nearly a million acres. Part of its enlargement is due to the substitution of this grain for Winter-killed Wheat. The condition of oats promised a large Crop if the average at the time of the Report referred to should be maintained.

Winter Rye had improved in condition, but no information has been received as to its present acreage.

Maize, which covered 69,683,000 acres in 1884, owing to its substitution this year for Winter Wheat that had been injured by freezing, is stated to have fully doubled its usual rate of increase in area, which is between 2 and 3 per cent.; whereas the July investigation showed an increase of 6 per cent. The area occupied by Maize is said to be always considerably larger than the combined acreage of other cereals in the United States. Its condition in July was higher than in any year since 1880, except 1884.

The yield of Wheat in 1884 was 512,763,900 bushels from 39,475,885 acres or 13.0 bushels per acre. Of other Corn Crops the average rates of produce were: Maize, 1,795,528,432 bushels, or 25.8 bushels per acre; Oats, 583,628,000, or 27.4 bushels per acre. Information as to the yield of Barley and Rye respectively has not been received.

From the latest Returns of Live Stock it appears that there were in the United States in 1884, 11,564,572 Horses; 1,972,569 Mules; 13,904,722 Milch Cows; 29,866,573 Oxen and other Cattle; 50,360,243 Sheep and Lambs; and 45,142,657 Pigs, showing in each description of Live Stock, except Sheep, an in-

United States
of America.

crease as compared with the respective figures for 1883. There is a decrease in Sheep of 266,000. Last year an increase had been reported in the value of all farm animals except Sheep and Swine. In the Returns received for 1884 there is a decline reported in all values, and as to Sheep, an additional depreciation on account of the change in the wool tariff, and in Swine from the abundance and low price of Indian Corn.

The rate of decline appears to have been between 1 and 2 per cent. only on Horses; over 2 per cent. on Mules; 5 on Cows; 2 per cent. on other Cattle; and 10 per cent. on Sheep and Swine respectively. The aggregate values of the different classes of animals in the Returns are 2,288,588*l.* less than those of last year, the increase in numbers going partly towards making up the loss in average value, the total estimated values being respectively, of Horses, 170,456,589*l.*; of Mules, 32,498,939*l.*; of Milch Cows, 82,580,618*l.*; of Oxen and other Cattle, 138,876,582*l.*; of Sheep, 21,592,130*l.*; and of Pigs, 45,280,336*l.* The grand total of 491,285,194*l.* formed of the several amounts here given, shows the importance of domestic animals in American Agriculture.

Estimated Pro-
duce of Crops
in 1885
to be published.

Arrangements have been again made by the Agricultural Department for ascertaining approximately the yield of the Corn and certain other Crops in Great Britain in the present year. The collection of these statistics will be still more complete in its character than it was in 1884, owing to the fact that an increased number of estimators will be employed, and the wider scope of the inquiry thereby made practicable. The Statistics will embrace particulars as to one or two other Crops, and it is proposed to give the data for each separate county.

The Returns will not be received until the end of November, and will subsequently entail considerable labour in their compilation, but they will then be published with as little delay as possible.

Agricultural Department,
Privy Council Office,
18th September 1885.

TABLES I. TO X.

AGRICULTURAL RETURNS

OF

GREAT BRITAIN,

WITH

Abstract Returns for the United Kingdom,

FOR

1885 AND 1884.

TABLE I.—TOTAL AREA; and ACREAGE under EACH KIND OF CROP, BARE FALLOW, the 4th June, in the Years 1885 and 1884, in each DIVISION of GREAT BRITAIN;

Note.—The prices of English Wool from 1865 to 1882 inclusive, are from the Annual Commercial History and Review of *The Economist* newspaper, as extracted by the Board of Trade. Those for 1883 and 1884 have been calculated from the prices given weekly in *The Economist* newspaper.

The figures relating to Australian and South African Wool are extracted or computed from the Returns of Imports into the United Kingdom; those from 1865 to 1869 inclusive, being the prices at which the Values of the Imports were actually computed, and those subsequent, being obtained by dividing the Declared Values by the Total Quantity of the Imports.
